Executive Summary

AIDS in Africa: Three scenarios to 2025

We wish to extend our gratitude to all those people and organizations who have given so generously of their time and expertise to the project. This has been given in many forms—both directly in terms of participation, such as at workshops and roundtables, or indirectly in the form of interviews, analysis papers, and discussions. A full list of people who contributed to the project can be found in Appendix 3.

UNAIDS thanks the following for generous sponsorship of the project *AIDS in Africa: Three scenarios to 2025*:

African Development Bank
Becton Dickinson
Bill and Melinda Gates Foundation
Canadian International Development Agency
Department for International Development, UK
Development Cooperation Ireland
Merck & Co., Inc.
Pfizer Inc.
Rockefeller Foundation
Royal Dutch/Shell Group
Swedish International Development Agency
United Nations Development Programme
United Nations Economic Commission for Africa
United States Agency for International Development

UNAIDS would particularly like to thank the African Union for the role they have played in helping this project to completion, initially in helping with the identification of participants, and throughout the project as a member of the steering committee.

The project has been supported by a steering committee that included the initiating partners, the UNAIDS Secretariat, the United Nations Development Programme, the World Bank, the African Development Bank, and the United Nations Economic Commission for Africa, together with the African Union and a representative of African civil society, as well as representatives of the project sponsors.

Our gratitude goes to the Royal Dutch/Shell Group who kindly shared their scenario development expertise—a field they pioneered more than 30 years ago—with the project. Shell graciously provided financial and logistical assistance and support, including their scenario methodology.

- The AIDS in Africa scenarios project is a synthesis of many diverse and sometimes opposing perspectives. It does not represent any single individual's or institution's viewpoint.
- The aim of the scenarios is to provide a tool to help decision-making rather than a set of prescriptions about the future.
- Some aspects of scenarios may be described with numbers, but the richness of the scenarios as a strategic tool stems partly from the fact that they can include more intangible aspects of the future. The numbers and projections in the scenarios are illustrations, rather than predictions of what might happen.

by dreaming.**

—Nigerian proverb.

Welcome to AIDS in Africa: Three scenarios to 2025

The decisions we make about the future are guided by our view of how the world works and what we think is possible. A scenario is a story that describes a possible future. Building and using scenarios can help people and organizations to learn, to create wider and more shared understanding, to improve decision-making and to galvanise commitment and informed action. People can use them to challenge their assumptions and implicit beliefs, and look beyond their usual worldview.

Scenarios draw on the age-old tradition of story-telling to help people think more imaginatively about difficult problems. Across the world, every culture tells stories, using them to make sense of the world and pass on that understanding from generation to generation.

This project uses stories rather than projections to explore the future of AIDS in Africa over the next 20 years. Statistics may give a succinct and tragic snapshot of recent events, but they say little of the AIDS epidemic's wider context, or its complex interconnections with other major issues, such as economic development, human security, peace, and violence. Statistics can only hint at the future. Indeed, by 2025, no one under the age of 50 in Africa will be able to remember a world without AIDS.

This executive summary is extracted from the complete publication. It is intended to deepen people's understanding of the possible course of the AIDS epidemic in Africa over the next 20 years, its context and impacts, and how particular policies may shape Africa's future.

The book is rich and detailed—reflecting the complexity of its subject matter.

Figure 1
Looking beyond our
normal worldview.

Some readers may be tempted to turn immediately to the numbers—how many treated, how many new infections, how many deaths by 2025? They are urged to remember that the scenarios are not predictions and that the goal of this project has never been to generate statistics. Its aim has been to explore how seemingly disconnected events and trends (for example, patterns of global trade, the education of girls and women, terrorist attacks on the other side of the world, the rise to power of a certain political regime) can work together to expand or limit an epidemic.

The scenarios were initially developed by a team of about 50, mainly African, men and women. Most of them live and work in Africa, dealing daily with the effects of the epidemic. They brought a wide range of experience and expertise, and were anxious to look beyond, and below the surface of, everyday events, sharing and building on their wide range of understanding.

As the project developed, the team used the image of a hippopotamus in a river to remind themselves of this idea. This is because, when a hippopotamus stands in a river, only a small part of it shows—most of it is hidden. In the same way, if we only pay attention to everyday events, then we may miss the complex patterns and structures that underpin them. A diving hippopotamus reminds us that patterns of behaviour lie below the surface of events, and the structure of the system lies deeper still.

Of course, given the widely varying circumstances, impacts, and effects of the

epidemic in countries across Africa, no set of scenarios can describe all the possible futures that could occur. This project has set out to be provocative rather than comprehensive, stimulating questions and exploration, rather than trying to provide all the answers. We hope that the scenarios will prompt further thinking about the future of the epidemic, not only for the whole of the continent, but also for individual countries and communities. In stimulating further policy dialogue and thinking in the national context, the scenarios may need to be adapted to the particular social, economic, and epidemiological conditions that apply in a particular nation—some suggestions for exercises to explore these issues are made in **Appendix 6** of the main publication.

For those who want to explore further, the accompanying CD-ROM contains most of the material commissioned for the project, both research papers and interviews, searchable by keyword. It also provides detailed reports of the project workshops and a number of presentations of the scenarios that can be used in group work.

These scenarios represent a crucial step in making sense of the future of the AIDS epidemic in Africa. It is the hope of the project initiators, participants, sponsors, and core team that this material will provide an essential starting point, not only for exploring and expanding people's understanding of the epidemic, but also for sharing that understanding with others.

The following pages list the complete contents of the main publication.
This booklet provides the complete text of the executive summary.

Contents

Section 1

11 Executive summary

13 The nature of the scenarios

13 A diverse continent and a diverse epidemic

13 Key assumptions and uncertainties

14 The five critical and uncertain forces driving AIDS in Africa

15 The scenarios

15 Tough choices: Africa takes a stand

17 Traps and legacies: The whirlpool

19 Times of transition: Africa overcomes

20 Implications and learning from across the three scenarios

22 Comparing key issues across the three scenarios

22 Exceptionalism versus isolationism

22 Resource needs and utilization

23 Using the scenarios

23 In conclusion...

Scenarios and their power

Section 2

Starting points

The virus and its impact

The spreading epidemic

The impact of AIDS

Responses to AIDS

National responses

International responses

Africa: a vast and diverse continent

Countries and cultures

Political diversity

Conflict

Population, movements, and connectivity

Economies: trade, aid, and debt

Scientific advances

The human factor

People living with HIV

Mental health and stigma

New and old forms of social capital

Section 3

Driving forces

The five critical, uncertain forces that are driving change

The growth or erosion of unity and integration

The evolution of beliefs, values, and meanings

The leveraging of resources and capabilities

The generation and application of knowledge

The distribution of power and authority

Comparing driving forces

Branching points

Interactions that create the scenario dynamics

HIV and AIDS programming

Access to and uptake of AIDS treatment

Gender relations

Predetermined forces

Shocks and radical discontinuities

Section 4

Tough choices: Africa takes a stand

Folktale

One World Review

Transcript of Tough choices

Part 1: The early years

Part 2: Years of building

Part 3: Living in a world with AIDS

Part 4: Years of reward

Tough choices: An overview

The human toll

Costing action

Poverty

All Africa overview

Section 5

Traps and legacies: The whirlpool

Folktale

One World Review

Transcript of Traps and legacies

Lecture 1: Introduction

The seven traps

Trap 1: The legacy of history

Trap 2: The cycle of poverty,
inequality, and disease

Lecture 2: The breakdown of trust

Trap 3: The divisions rupturing society

Trap 4: The quest for swift dividends

Lecture 3: The failed promises of trade and aid

Trap 5: The challenges of
globalization: integration and
marginalization

Trap 6: Aid dependency and the
quest for global security

Lecture 4: Running so hard—to stand still?

Trap 7: Responding to the AIDS
epidemic: shortcuts and magic bullets

Conclusion: Breaking the circle
of blame

Traps and legacies: An overview

The human toll

Costing action

Poverty

All Africa overview

Section 6

Times of transition: Africa overcomes

Folktale

One World Review

Transcript of Times of transition

Introduction

Setting the stage

Signs of hope... and intimations of
disaster

The six transitions

1. Back from the brink

2. Setting the house in order

3. Working together for development

4. Trading on strengths

5. Human hearts and human rights

6. Planting peace

Virtuous cycles

Times of transition: An overview

The human toll

Costing action

Poverty

All Africa overview

Section 7

Scenario analysis

The scenarios

Tough choices: Africa takes a stand
Traps and legacies: The whirlpool
Times of transition: Africa overcomes

Common challenges

Defining the crisis is crucial
The impact of the epidemic is yet to come
Exceptionalism versus isolationism
The danger of swift dividends
Dependency, independence, and interdependence
The dangers of ignoring local culture and meaning
The problem with policy triage and the public debate
Leadership is not enough but is important
There is no magic bullet
Bad action may be worse than no action
Gender
Taking care of orphans and other vulnerable children
Mental and physical treatment
Who benefits from social change?
Local responses are critical
Religious transformation
The significance of time

Section 8

Using scenarios

Building the AIDS in Africa scenarios

Tools for understanding

Funding the necessary response

HIV and AIDS programme expenditure by source
Spending more buys better health and more years of life
Spending money to save money
The balance between prevention and care
Orphans and vulnerable children
Per capita income in Africa
Success stories of early interventions

The AIDS epidemic

People newly infected with HIV
Adults living with HIV and AIDS
Children living with HIV and AIDS
People dying from AIDS
Scaling up prevention

Comparing key elements across the scenarios

Section 9

Appendices

Appendix 1: Costing and coverage estimations

Prevention

Care and treatment

Orphan care

Policy, management, administration, research, evaluation, and monitoring

Training and infrastructure

Appendix 2:

Modelling assumptions

Data

Handling the data and terminology

Appendix 3: List of contributors

Appendix 4: Glossary

Appendix 5: Bibliography

Appendix 6: Exercises to support the scenario process

Exercise 1: Short overview

presentation of the scenarios

Exercise 2: Telling your own stories

Exercise 3: Developing country-specific scenarios

Exercise 4: Test or challenge a vision or strategy

Acronyms

AIDS	Acquired immune deficiency syndrome
ART	Antiretroviral therapy
ARV	Antiretroviral drug
AU	African Union

AIDS in Africa: Three scenarios to 2025

The decisions we make about the future are guided by our view of how the world works and what we think is possible.

Scenarios are stories about the future; but their purpose is to help make better decisions about the present. People can use them to challenge their assumptions and implicit beliefs, and look beyond their usual worldview.

This book and the accompanying CD-ROM are intended to deepen people's understanding of the possible course of the AIDS epidemic in Africa over the next 20 years, its context and impacts, and how particular policies may shape Africa's future.

“ No progress can be made by any nation unless serious attention is given to the control of malaria, TB and HIV/AIDS.

—President Obasanjo of Nigeria, May 2004.
